

# Should Christmas lights be left on all the time?

Christmas lights are lovely to look at and are pretty easy to put up. Lots of people put up Christmas lights. But they can cause damage when they are left on all the time.

The lights can cause climate change around the world. The bills might get higher if you leave them on. There is a risk of a fire, because there might be too much plugs in one socket.

Therefore lights cause damage and they shouldn't be left on.
