

Should You Burn Rubbish?

Burning rubbish is the easy way out. It doesn't just warm you it warms the earth too. We think burning rubbish is not good.

Every bit of rubbish you burn creates carbon which is a gas that damages the atmosphere.

Global warming is another problem because when somebody lights a fire it heats the earth.

Also if children are playing outside it can damage their lungs when they breathe it in.

We hope people stop burning rubbish and save the Earth.
